LAXTRACIDE SD

TECHNICAL INFORMATION

Description

It is a powerful and highly effective activated silicon-based defoamer. Due to its unique properties, it can be used in practically all industrial applications where unwanted foam creates problem in manufacturing process.

Composition

Silicon oil based defoamer

Functional Properties

Defoamer
Foam Control Agent

Target Industries

Waste Water Treatment
Soaps and Detergents
Bitumen
Sugar
Oil Field & Petroleum
Dyes and Pigments
Construcion
Agriculture
Paper and Pulp
Adhesives
Emulsion Polymerization

Typical Properties

Colour & Appearance	White stable emulsion
Nature	Nonionic
pH (in distilled water)	5.0 - 7.0
Solubility in water	Dispersible
Solids %	30

Dosage

The dosage of Laxtracide SD is recommended @ 0.1 to 0.5 % of the final product depending on the type and susceptibility of the finished product and the raw material used.

The Sonachi Microbiological Laboratory will be ready to assist in the optimization of the dosages required for the products. This facility is most useful where formulation has greater microbiological susceptibility.

Method of Use

Laxtracide SD can be added either manually or by automatic metering device, at any stage of the production process.

Compatibility

Laxtracide SD is compatible with most of the raw materials used in the microbiological susceptible products. It causes no discoloration and may be used in formaldehyde sensitive systems.

Availability

Laxtracide SD is readily available ex-stock at all time in 50/200 kgs HDPE carboys.

Storage

It is also recommended that product should be stored in original Sonachi sealed containers at ambient temperature and protect from direct exposure of sunlight. It is also recommended that product should be used within 6 months of delivery.

Handling

Since material is classified as irritant may produce some burning skin. It is recommended that normal protective clothing, gloves and face protection should be worn during handling the product.

Toxicology
